Office: (818) 345-7844 / After Hours: (818) 523-2767

Eyeliner - \$800 (upper & lower) / \$600 (one)
Touch-Up \$350/\$300

Consultation, Expectations and Procedure:

The procedure takes between 1.5 to 2 hours. First we will take a before picture. It is for records and insurance purposes. We will then discuss expectations, color, shape and your lifestyle. You will remove contact lenses if you wear them.

I will apply eye drops and a topical anesthetic that is especially made for the eye. This is a lidocaine product, and you will be numb in 20 minutes. I then remove the topical and begin implanting the color with a sterile, one time use needle and handle. If you have any pain, I will give you a second application of anesthetic. After I complete the implantation, I clean the area and apply sterile Vaseline and rinse the eye.

*Please let me know if you are using Lastisse or any other brand of Eyelash Growth Serums. Let me know if you have Glaucoma.

Post Care Instructions:

Try not to rub or disturb the area. The pigment needs to settle and heal into the skin. An ice gel pack or cold compresses applied on the day of the procedure is a good idea, to reduce swelling and close the pores.

If you find bits of pigment or Vaseline in the corner of the eye, remove it with a Q-tip. Do not use your fingers. You will be applying a thin coat of Vaseline before you shower or wash your face. This will protect the work and keep bacteria out. You will need to do this for one week. PLEASE DO NOT USE NEOSPORIN FOR ANY REASON. If you feel the need for an antibiotic ointment, please use Polysporin. Also, PLEASE DO NOT TAKE ADVIL, ASPRIN or ALEVE FOR 3 DAYS and refrain from partaking in heavy exercise for at least 1 week. Also no facials, massages or chiropractic sessions. I don't want you laying on your face.

You will also need to avoid using mascara for one week. I recommend you buy a new tube as mascara can be full of bacteria. It is also hard to remove without rubbing the eye and it is important to be as delicate as possible with your new eyeliner.

Rinsing the eye with eye wash is a good idea. Do this before going to bed, and in the morning, and any other time you feel the need. Please call me if your eye is red and itchy. You could have come in contact with conjunctivitis bacteria. This is easily treated with eyedrops from the doctor, but should not be ignored.

You could use ice to reduce swelling and inflammation. You may lose some of the pigment after the first week of healing. Do not worry about this, since we will have a touch-up appointment. I can also make it wider and darker, if desired. There is no fee for the 2nd session follow up.
Enjoy your newfound freedom from tedious eyeliner makeup application.
